PROFILE

I'm a Frontend Developer with nearly five years of experience building enterprise web applications for industrial IoT. At Faclon Labs, I turn live device, energy, alarm, and operational data into responsive Angular dashboards that are practical for real users. I enjoy solving difficult UI and data-flow problems, building reusable components, and collaborating closely with product, backend, and QA teams. Alongside my frontend work, I'm growing into full-stack and AI development through Node.js, Python, OpenAI APIs, and permission-aware developer tools.

EXPERIENCE

Frontend Developer

May 2022 — Present

Faclon Labs · Mumbai, India

- Build enterprise industrial IoT dashboards using Angular, TypeScript, REST APIs, and real-time data streams.
- Create Highcharts widgets, interactive data visualizations, and map-based views for live sensor data and device locations.
- Build configurable dashboards with expressions, custom calculations, and rule-based actions for varied client requirements.
- Helped scale dashboard capacity from roughly 500 to more than 3,000 connected devices while maintaining a responsive experience.
- Develop reusable React widgets for modular use within Angular micro-frontends.
- Contribute to planning, architecture discussions, code reviews, onboarding, production fixes, and cross-functional delivery.

Angular Developer Intern

Nov 2021 — May 2022

Faclon Labs · Mumbai, India

- Built Highcharts dashboards to visualize real-time IoT device data and key operational metrics.
- Integrated REST APIs and live streams to present accurate, responsive device information.
- Debugged production issues and contributed to feature work, optimization, and code quality.

Freelance Web Developer

Independent · Alongside full-time work

Take on selected web projects involving responsive business websites, maintainable frontend implementation, REST API integration, performance improvements, and deployment-ready handoff.

SELECTED WORK

IoT Smart SCADA Dashboard

Real-time industrial monitoring for sensor data, alarms, machine performance, and operational KPIs using Angular, TypeScript, RxJS, MQTT, REST APIs, and SCSS.

Configurable IoT Widget Platform

Reusable widget and template architecture for KPI, chart, alarm, asset, energy, and reporting experiences across multiple IoT dashboard workflows.

Alarm & Reporting System

Permission-Aware Developer Agent

Operational workspace for active alarms, acknowledgements, scheduled reports, energy use, uptime, fault history, and live monitoring.

Current personal AI project: retains project context, detects issues, applies scoped fixes, validates results, and asks for explicit approval before Git commits or GitHub pushes.

SKILLS

Frontend: Angular, TypeScript, JavaScript, RxJS, React, Highcharts, HTML5, CSS3, SCSS, Angular Material, Tailwind CSS, Bootstrap
Architecture: Reusable components, configurable dashboards, dynamic widgets, micro-frontends, Module Federation, Nx, Signals, OnPush
Backend & data: Node.js, Express.js, MongoDB, REST APIs, MQTT, Firebase
AI — actively developing: Python, OpenAI API, prompt engineering, tool calling, agentic workflows, context and memory, human-in-the-loop systems
Engineering: Git, GitHub, Docker, Jenkins, CI/CD, Jest, Jasmine, Karma, Agile

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, Computer Science · North Maharashtra University · 2017–2021 · CGPA 7.83 / 10

Advanced Angular Development — Udemy · React & Node.js Full Stack Development · TypeScript & RxJS — FreeCodeCamp
